

## Current BlockMaster Customers and Resellers FAQ

### What is this news regarding BlockMaster and Kingston?

Kingston Digital, Inc., the Flash memory affiliate of Kingston Technology Company, Inc., the independent world leader in memory products, has announced that it will partner with BlockMaster to bring USB security management to its devices. The focus is to provide greater availability of centrally managed secure USB drives.

By adding management for secure USB drives you attain additional benefits crucial to any organization going down the route of USB security. You gain full management control and visibility and aid everyday usage by enforcing administrator supervision.

### Does anything happen with BlockMaster's current SafeStick line of secure USB flash drives?

No, the current product line remains the same and will continue to be developed as usual.

### Why will BlockMaster offer SafeConsole for Kingston devices?

By enabling selected Kingston devices to work with SafeConsole the number of devices that are manageable quickly increase. For our customers it means more choice and for our partners more potential business. The partnership will help usher in a new level of awareness of USB security.

### What does this mean for the future of SafeConsole?

It is clear that the need for management of secure USB flash drives is rapidly growing. No solution manages more devices than SafeConsole and the partnership assures that SafeConsole will be in the forefront in regards of technical development and market share. Simply put SafeConsole is setting the standard for USB management as it ignites the potential usage of secure USB drives and turns them into highly portable computing platforms.

### When will the first Kingston product for SafeConsole be released?

The release is expected for Q3 2010.

### What happens next?

As the partnership develops our customers and partners will be continuously updated.
