

IPSWITCH

IMail Server v11

Second only to Exchange with the best support in the industry.

IPSWITCH

IMail Server Version 11: Second only to Exchange

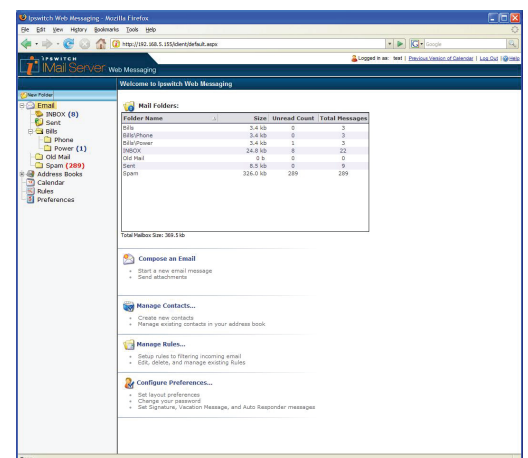

IMail Server is a proven email solution that 60 million users worldwide rely on every day. With IMail, users can send and receive email using any standards-based client, including Microsoft® Outlook®, Outlook Express®, or Eudora®. Or, users can access email from anywhere via IMail's customizable Web messaging, available in eight languages.

Ipswitch IMail Server installs quickly, and unlike more complicated, large-footprint messaging solutions, IMail is designed to place minimal ongoing maintenance burden on network administrators. IMail can authenticate users from its own database, an active directory data-base, or from any ODBC-compliant data store, making life easier for the busy administrator. IMail can be administered from any location with a Web browser, and can be run on a single, modestly-powered server.

For small to mid-sized businesses, success depends on getting more done with less. For many, this means these organizations must constantly strive to keep costs down by implementing practical software solutions that allow the organization to remain competitive. Ipswitch IMail Server meets the needs of small to mid-sized businesses by providing secure, powerful and straightforward messaging capabilities in a comprehensive solution that is easy to install, easy to maintain and easy to use.

The Value of IMail Server

- > Scalable, standards-based, email server with Webmail, SMTP, POP, IMAP, LDAP, and List Server
- > Basic Security with SMTP Auth and dictionary attack sensing
- > Premium Anti-spam provided by Commtouch
- > Anti-virus protection provided by Symantec or BitDefender
- > Secure Instant Messaging with 168-bit 3DES encryption
- > Shared Outlook calendars and global address books with Web access
- > Full mobile synchronization and push email services
- > And much more...all for approximately 1/10th of the cost of MS Exchange Server

IMail Server Version 11's web messaging allows users to send and receive rich-text messages and features and intuitive user interface.
