

MOVEIT DMZ AD HOC TRANSFER MODULE

Person-to-person File Transfer

IPSWITCH
FILE TRANSFER

Each and every day, billions of files are shared as employees send critical information to other people around the globe as part of their daily work. Email is the most popular tool for this collaboration, but unfortunately email solutions only allow companies to enforce a limited amount of procedures, such as encryption and file attachment policies. As a result, most organizations haven't done as much as they can to make file-sharing processes as fast, easy, and secure as possible, making file sharing a real risk ... and a real opportunity.

Now organizations can enforce all consistent policies and processes around person-to-person file transfer interactions – security, privacy, risk mitigation, eDiscovery, and more – with the MOVEit DMZ Enterprise Ad Hoc Transfer module from Ipswitch File Transfer.

The Ad Hoc Transfer module delivers several significant benefits in the following areas:

- **Visibility:** Empower IT with the visibility and control it needs to give the entire organization the data protection it requires. Plus, complete visibility into “who sent what to whom and when,” the organization improves risk management practices.
- **Management:** Improve the management of any kind of transfer no matter whether they are implicit ad-hoc transfers or more explicit scheduled or recurring transfers.
- **Enforcement:** This powerful module gives administrators a much more effective way to enforce their most critical policies, including security, access control, data retention, and more.
- **User experience:** Now the organization can improve the user experience with a simple, intuitive, and secure way to quickly transfer files to other people.

The Industry's Most Effective Person-to-person File Transfer Solution

The Ad Hoc Transfer module enables secure person-to-person file transfer using the convenience of a Web browser or Microsoft

Outlook. Authorized MOVEit DMZ Enterprise users can now send files to anyone in the world with an email address – quickly, easily, and securely.

Available as an optional module for any of the industry-leading MOVEit DMZ solutions, the Ad Hoc Transfer module enables organizations to manage person-to-person file transfer interactions and proactively apply encryption, access control and authentication, data loss prevention, and content management policies. It also provides reactive management technologies to help companies fully audit and report on all of these transactions.

It doesn't matter if your file transfer interactions are implicitly ad hoc –spontaneous, impromptu, and defined at the time of collaboration – or if they are more predefined, scheduled, and recurring explicit interactions. The Ad Hoc Transfer module can improve the management of all these interactions and more, and delivers powerful benefits for three important user groups: file senders, file recipients, and IT professionals.

Benefits For File Senders: The Fastest, Easiest, And Most Secure Way To Send Files To Other People

Now there's a better option than insecure email, third-party software, thumb drives, or file transfer websites. Not only are these tools out side of the organization's control and often insecure, but they are also becoming increasingly restricted as companies seek to improve governance, visibility, and security of company information.

With the MOVEit DMZ Enterprise Ad Hoc Transfer module, authorized MOVEit DMZ Enterprise users can securely transfer files to anyone in the world using either a Web browser or Microsoft Outlook. They can send a package of files along with an optional delivery note to an unlimited number of recipients, even those who are not MOVEit DMZ Enterprise users.

Benefits For File Recipients: Fast Notification And Simple Retrieval Of Files

Recipients are sent email notification the instant a MOVEit DMZ Enterprise user sends them a file. The email notification includes an embedded link to

Person-to-person File Transfer Has Never Been This Fast, Easy, Or Convenient

MOVEit DMZ Enterprise users now have a choice when it comes to file transfer. They can use a Web browser or Microsoft Outlook to send files quickly, easily, and securely to other people.

- **Web Browsers:** Users simply log on to the Ad Hoc Transfer webpage, define what files to send and whom to send them to, and click send.
- **Microsoft Outlook:** Alternatively, users can choose to send files right from a familiar email application for increased ease of use and end-user adoption.

Business Benefits

- No training required. Senders use familiar tools to send files (web browser and Microsoft Outlook).
- Increased productivity. No more wasted time figuring out how to send a file to someone.
- Can send files to anyone both internal and external to an organization.
- Removes the “file attachment” burden from the email server.

IT Benefits

- Proactively manage all file transfer interactions, both within the company and also with people external to the organization.
- Enforce administrator defined policies and rules for sending files to other people.
- Provides complete visibility into all file sharing activities.
- Removes the “file attachment” burden from the email server.

MOVEIT DMZ AD HOC TRANSFER MODULE

securely download the file or files, an optional note from the sender, and password requirements.

This email message can be viewed in any email client or Webmail application, and the recipient only has to click the embedded link to access the files.

File recipients can retrieve files from their preferred Web browser – including Internet Explorer, Firefox, Safari, or Chrome – without the need to install any plug-ins or additional third-party software. Recipients don't even need to be a MOVEit DMZ Enterprise user to be able to receive the file packages.

Benefits For IT: Provide Employees With A Secure Way To Quickly Send Files To Other People

By providing employees with a secure and easy-to-use tool to securely transfer files, the Ad Hoc Transfer module reduces employees' reliance on insecure email and third-party file transfer software and websites, not to mention thumb drives and DVDs.

This solution gives IT the visibility and control it needs to give the entire organization the data protection it requires. Additionally, the Ad Hoc Transfer module frees IT departments from the administrative burden related to

provisioning users on the file transfer server, improves overall file transfer governance, and streamlines visibility, logging, and reporting of all file transfers for compliance and auditing purposes. The module also provides all the advantages of eDiscovery. With tamper-evident logging and complete package archiving, users can access all transferred data – not just what was sent or received.

The Ad Hoc Transfer module is also extremely easy to set up and maintain. IT administrators only need to enable the module on the MOVEit DMZ Enterprise administration console and define which users should have access. They can also easily configure transfer settings and policies, including sender quotas, file-size limitations, file-delivery notifications, password policies, embedded link-naming conventions, and file time-to-live expiration rules.

The Ad Hoc Transfer module also removes the file attachment burden on the organization's email server. This reduces the number of bounced emails due to large file attachments and clogging recipients' inboxes with large files, thus improving the organization's server performance.
