

NACwall MSSP Offering

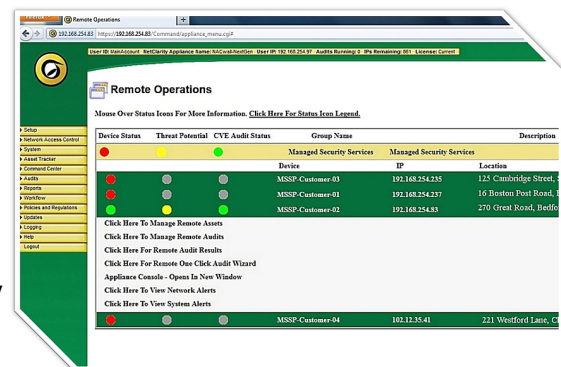

Managed Security Service Providers (MSSPs) – Join the Next Generation NAC Revolution – Secure your SMB Customers Networks from the Inside-Out, behind their firewalls, remotely.

Firewalls protect networks from the outside while over 80% of successful attacks happen from the inside (sources: FBI.gov, MITRE.org, USCert.gov and Sans.org). The NACwall product family with daily updates provides SMB MSSPs with the tools they need protect small business and enterprise remote office networks from the inside-out.

Why Next Generation NAC for your SMB customers?

- Fits within any normal IT budget
- Easy to deploy and manage
- Scales to any network size
- No trust agents or client software necessary
- Manages internal risk and compliance issues
- Provides security behind existing firewalls
- Nearly invisible on the network
- *No infrastructure changes necessary to deploy*

MSSP Benefits Include:

- Low initial investment in NACwall equipment and monthly lease options drastically reduce the up-front capital investment. Includes hardware warranty and software subscription service.
- Provide an ADT®-like offering for Inside-Out Network Security® in a matter of minutes.
- Secure control of all remote customer appliances through built-in command center.
- Ability to add new customers by deploying NACwall Nano units in less than an hour, per site.
- Interoperates and helps manage all networking environments, devices and operating systems without any changes to existing infrastructure.
- Finds customer holes for new IT remediation and system hardening opportunities.

Make network access control, vulnerability audits and regulatory compliance simple, automated and real-time with the addition of a NetClarity NACwall NG. With NACwall NG appliances, intrusion defense is only a few clicks away. MSSP Command Center to manage any NACwall

Next Generation appliance family member built-in at no extra charge. Also includes compliance auditing and self-assessment tools for various regulations and standards including ISO27001. Annual Subscription for daily Cloud Updates service including asset, vulnerability (CVEs) and threat signatures (zero-day malware) plus the CVE auditing, malware quarantine and compliance reporting engines. We've made it easy to help you get started. This program is specifically designed to lower the entry cost for any Managed Service Providers (MSPs) and Managed Security Service Providers (MSSPs) to begin offering Inside-Out Network Security® to your customers. There's a very low cost activation fee for each appliance, deployed as part of your service offering and a low cost monthly fee which covers your equipment acquisition costs along with a hardware, firmware and daily cloud updates for new threats, vulnerabilities and network asset signatures.
