

SafeWord 2008: OTP Strong Authentication Solutions for Secure Remote Access

PRODUCT BRIEF

Benefits

- Secure remote access for leading VPNs, SaaS applications, Citrix applications
- Embedded cloud support lets you extend secure access to SaaS applications using the same platform*
- Tailor the authentication method to users' needs with a variety of hardware and software authentication options
- Fast and easy installation: up and running in minutes - no technical training required
- Recognized as the easiest solution to administer, manage, and use for Windows environments
- Enables compliance with privacy regulations
- Lifetime Token Warranty: SafeWord 2008 authenticators never expire and come with a lifetime token warranty. (Customers should have a current support contract for all users to be eligible.)

* Available with the additional ESP package.

SafeWord 2008 is an out-of-the-box one-time password (OTP), two-factor authentication solution that enables secure remote access to your organization's most sensitive and confidential resources.

With the push of a button, SafeWord authenticators generate a highly secure, one-time password that can never be reused, hacked, or compromised. The password's two-factor authentication mechanism ensures that only properly authenticated users can access critical applications and data, whether they reside in your data center, the cloud, or virtualized environments.

Features

All-in-one Solution

SafeWord 2008 offers both hardware and mobile authenticators, as well as management software and maintenance, in an all-in-one OTP authentication solution that is easy to install, use, and manage.

Embedded Cloud Support

SafeWord 2008 allows you to seamlessly extend secure access to cloud-based SaaS applications such as GoogleApps and Salesforce.com, using the same easy-to-install and -maintain management software and authenticators that you use for secure VPN and Citrix access.

Supports Hardware and Mobile Authenticators

SafeWord 2008 supports a range of hardware and mobile authenticators that can be deployed side by side or incrementally as needed. These include:

- **MobilePASS software solutions:** Available for all mobile clients, including iPhone, BlackBerry, Windows Mobile, Android, J2ME, Mac OS, and Windows Desktops. MobilePASS also offers SMS passcode delivery to mobile devices.
- **eToken PASS:** A compact and portable one-time password (OTP) authenticator. eToken PASS is OATH compliant and is available in both time-sync and event-based configurations.
- **GOLD:** The GOLD authenticator offers highly effective two-factor authentication with the added security of PIN protection and a challenge/response mechanism.

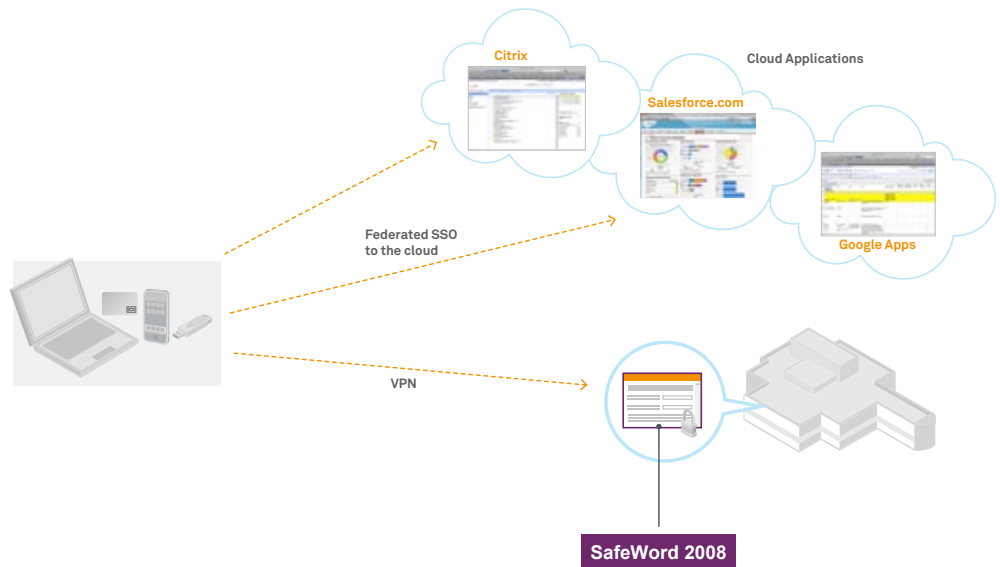

Supported Solutions:

- Secure remote access for employees, partners, and customers
- Transaction security

Effective Management through Active Directory

SafeWord 2008 provides seamless integration with Active Directory, and enables organizations to leverage existing Windows environments to implement a simple and straightforward authentication solution, including user self-help and enrollment capabilities, facilitating simplified deployment and maintenance.

Additional management capabilities are available with the Enterprise Solution Pack (ESP), which lets you manage users outside of Microsoft Active Directory.

The SafeNet Family of Strong Authentication and Transaction Security Solutions

Offering flexible management platforms, the broadest range of strong authentication methodologies and form factors, and transaction verification capabilities, as well as identity federation and Single Sign-on, SafeNet solutions create a future-ready security foundation that allows organizations to adopt a modular, forward-looking identity management strategy, ensuring that their security needs are met as new threats, devices, and use cases evolve.
