

SecureDoc Self-Extractor 140

Securing and Sending your Sensitive Data made Simple!

So how do you send an encrypted file to a computer without encryption software?

Use SecureDoc Self-Extractor 140!

SecureDoc™ Self-Extractor 140: A self-extracting utility that allows you to share your sensitive data with trusted third parties without compromising security and maximizing efficiency and productivity. While sending sensitive data, rest assured that your confidential information will be protected from unauthorized access by a strong AES 256-bit, FIPS 140 approved crypto engine, combined with a password of your choice.

SecureDoc Self-Extractor 140 is an easy to use, secure, time-saving tool that allows you to transport information with ease and convenience. Sending encrypted information is made into child's play with SecureDoc Self-Extractor 140!

About the Self-Extractor

Selected files or folders are packaged into an executable archive file that contains both, an encrypted copy of the file, as well as the information needed to decrypt it. Multiple files or folders can be added to the same archive, ensuring that important files are not separated. To view the archive and to extract and decrypt its contents, end-users simply double-click on the setup executive, and follow the wizard steps. End-users do not need to have any WinMagic software installed on their PC, nor do they have to install any applications - they simply need to enter the appropriate, pre-determined password.

WINMAGIC®
DATA SECURITY

Knowing You're Protected

SecureDoc Self-Extractor 140 offers the Following Features:

Automatic, Transparent or Manual Compression and Encryption

Transparent and seamless encryption for multiple files

Strong AES 256-bit Encryption

Our enterprise-class, government-grade AES 245-bit crypto engine ensures that your sensitive data and that your clients' personal identifiable information will remain secure from unauthorized access. The AES 245-bit encryption engine is also FIPS approved, and will assist your organization in complying with privacy and security regulations.

Advanced File Compression

Achieve optimal file compression to ensure that your files are as small as possible so that they may be sent quickly and easily.

Strong Password Rules

Use strong passwords to protect your confidential information from unauthorized access. Administrators may also enforce complex password policies including maximum and minimum length, maximum number of characters, maximum number of non-numeric characters, the number of days that passwords may be kept for, etc. Password information will be stored in the SQL Server database in an encrypted format using AES 256-bit encryption.

Flexible Configuration

SecureDoc Self-Extractor 140 is designed to help you comply with the specific security and privacy requirements of your organizations, and will work seamlessly with your companies existing IT infrastructure.

Requirements

SecureDoc Self-Extractor 140 supports Windows 2000 with SP4 and Security Rollup, XP with SP2, 2003, and Vista.

As a minimum, SecureDoc Self-Extractor 140 requires a Pentium Processor, and 128 MB of RAM, and 128MB of free space on the hard drive.

WINMAGIC
DATA SECURITY

WinMagic's SecureDoc full-disk encryption solutions make it simple to protect all data on desktops, laptops, tablets and removable media including USB thumb drives, CD/DVDs, and SD Cards. Compatible with Microsoft Windows 7, Vista, XP, and 2000 as well as Mac and Linux platforms, SecureDoc makes it just as easy to centrally manage and use an encrypted device as an unencrypted device including Seagate and Opal self-encrypting drives. WinMagic is trusted by thousands of enterprises and government organizations worldwide to minimize business risks, meet privacy/regulatory compliance requirements, and protect valuable information assets against unauthorized access. With a full complement of professional and customer services, WinMagic supports over three million SecureDoc users in approximately 43 countries.
